

Gavyn Caldwell

SUMMARY

As a highly experienced Frontend Developer with over 7 years of professional experience, I have a strong background in working with both startup and large company environments. Throughout my career, I have established a proven track record of effectively collaborating with cross-functional teams, working remotely, managing a small remote development team, and implementing modernization strategies for legacy codebases. As a collaborative team player, I am now seeking a new opportunity to contribute my skills and expertise to a dynamic organization.

EXPERIENCE

Ask Hoodie - Senior Frontend Developer – MARCH 2022 - Current

- Collaborated closely with stakeholders to develop Ask Hoodie into a robust, modern production app used by thousands of daily users.
- Built consumer-facing and white-label applications that utilized big data to present customers with product options and provide businesses with tools to help their customers find products.
- Boosted daily unique impressions from 50 to over 50,000 within six months of employment by implementing SEO best practices.
- Enhanced test coverage by over 50% by incorporating unit and end-to-end tests throughout the codebase using cypress, jest, and react testing library.

Quivers - Lead UI Engineer – JULY 2018 - MARCH 2022

- Improved scalability and future development by introducing React within a legacy Angular 1 app, modernizing the codebase and architecture.
- Led a small front-end team consisting of four remote and one local developer, delivering multiple products requiring diverse skills such as React, dev-ops, PHP, Angular 1, CI/CD, etc.
- Built scalable solutions that optimized development efficiency for the front-end team.
- Collaborated closely with stakeholders, back-end developers, and designers to develop cutting-edge e-commerce projects and products.

Clearlink - Front End Developer – JANUARY 2018 - MAY 2018

- Achieved SEO and marketing success by developing SEO and PPC pages and websites using handlebars (HTML), CSS, and JavaScript for Verizon.
- Worked collaboratively with designers, copywriters, project managers, SEO, and PPC managers to create pages with high conversion rates.
- Contributed to breaking multiple conversion, SEO, PPC, and revenue records for the team.

NAV - Associate Software Engineer – MAY 2016 - NOVEMBER 2017

- Developed fintech web applications with React, Redux, Node, HTML5, and CSS3.
- Collaborated across departments to create a new line of enterprise apps and revenue stream for Nav from scratch.
- Served as a crucial member of a two-person team responsible for all UI aspects, including HTML, CSS, and JavaScript.
- Developed internal apps/scripts to locate and delete unused CSS code and headlessly take screenshots of the app in various screen widths.
