

Gavyn Caldwell

SUMMARY

Frontend developer with 7 years of professional experience. I've worked in both startup and large company environments. Proven track record working successfully on cross-functional teams, working remotely, running a small remote development team, and modernizing legacy codebases. Collaborative team player ready for a new opportunity.

EXPERIENCE

Ask Hoodie - Senior Frontend Developer

MARCH 2022 - Current

- Worked closely with stakeholders to build Ask Hoodie into a modern, stable production app that thousands of people use daily.
- Built a consumer-facing and white-label application that leveraged big data to present consumers with product options, and provide companies with tools to help their consumers find their products.
- Within 6 months of employment improved unique daily impressions from 50 to over 50,000 per day by implementing best practices for SEO.
- Improved test coverage by over 50% by creating unit and end-to-end tests throughout the codebase using cypress, jest, and react testing library.

Quivers - Lead UI Engineer

JULY 2018 - MARCH 2022

- Improved scalability and future development by implementing React within a legacy Angular 1 app to aid in modernizing our codebase and architecture.
- Worked on multiple products which required a mix of skills including React, dev-ops, PHP, Angular 1, CI/CD, and more.
- Led a small front-end team, including four remote and one local developer.
- Built scalable solutions to make development continually easier and more efficient for the front-end team.
- Worked closely with the back-end developers and designers to create leading-edge new e-commerce projects and products for our users.

Clearlink - Front End Developer

JANUARY 2018 - MAY 2018

- Drove SEO and marketing success specifically for Verizon by developing SEO and PPC pages and websites using handlebars (HTML), CSS, and JavaScript.
- Worked closely with designers, copywriters, project managers, SEO, and PPC managers to create pages that have high conversion rates.
- Helped beat multiple conversion, SEO, PPC, and revenue records for our team.

NAV - Associate Software Engineer

MAY 2016 - NOVEMBER 2017

- Built fintech web application utilizing React, Redux, Node, HTML5, and CSS3
- Worked cross-functionally to create a new line of enterprise apps and a new revenue line for Nav from scratch.
- A key member of a two-person team, that owned all UI parts around HTML, CSS, and JavaScript.
- Created internal apps/scripts to help us find and delete unused CSS code, and headlessly take screenshots of our app in multiple screen widths.
